Professional Summary

Software Engineer with 10+ years of experience building scalable, high-quality web applications at companies like Onehouse, Harness, and Walmart. Proficient in React, TypeScript, JavaScript, and modern frontend tools. Skilled in frontend architecture, performance optimization, testing strategies, design systems, and mentoring. Adept at collaborating cross-functionally and contributing to backend services using Java and Node.js.

Technical Skills

Frontend: React.js, Next.js, Redux, JavaScript, TypeScript, SCSS, Material UI, Cypress, Jest, RTL

Backend: Node.js, Java, gRPC, Kafka, Play Framework

DevOps/Tools: Git, CI/CD, Terraform, AWS, Sentry, Amplitude, Figma

Database: MongoDB, MySQL

Others: D3.js, Web Accessibility, Web Vitals, Performance Optimization

Professional Experience

Onehouse – Senior Frontend Engineer

Jul 2024 – Present | Bengaluru, India

- Led development of core platform features including Table Services, Compute Clusters, Access Controls, and Groups & Permissions, contributing to onboarding 5 customers and 7 active POCs.
- Led a 26-story frontend performance initiative — API waterfall parallelization, endpoint splitting, call deduplication, and bundle code-splitting — reducing p75 LCP by 13–29% across the four highest-traffic pages of the Next.js data-platform console, measured via Sentry Web Vitals.
- Built Onehouse's notification platform end to end, replacing a hardcoded compile-time recipient map with customer-configurable rules across six resource types on a durable Kafka delivery pipeline with per-destination at-least-once guarantees, idempotency, and dead-lettering — in place of fire-and-forget delivery that dropped failure alerts silently.
- Architected and completed a new design system and shared component library, significantly improving usability and consistency across the platform.
- Implemented Dark Theme platform-wide single-handedly and integrated Amplitude telemetry for data-driven product insights.
- Created a Claude-based AI design workflow enabling engineers to independently ideate, generate designs, and ship UI changes without design-team dependency, and drove adoption of AI-assisted development practices across the frontend team.
- Contributed across frontend, Java backend services, Terraform infra workflows, and Python/Go automation scripts — including building automated Terraform registry token rotation workflows with customer email notifications for seamless updates.

Tech Stack: React.js, Next.js, Redux, TypeScript, JavaScript, Material UI, gRPC, Java, Kafka, Terraform, Python, Go, Jest, Cypress

Harness – Staff Software Engineer

Mar 2021 – May 2024 | Bengaluru, India

- Built high-impact deployment features supporting AWS Lambda, AWS SAM, Google Cloud Functions, Azure Functions, and Amazon ECS — driving onboarding of 20+ customers and expanding CD adoption to 50+ customers.
- Developed shared CD capabilities including Git Experience for syncing pipelines with Git and Execution Strategy panels supporting multiple deployment strategies such as rolling and blue-green deployments, contributing to increased enterprise adoption and revenue expansion.
- Reduced delivery time of complex deployment features from 4+ weeks to under 1 week by addressing technical debt, eliminating inefficient practices (e.g., Jest snapshot tests), and improving testing strategies.
- Led and mentored a team of 6 engineers, overseeing technical planning, task prioritization, PR reviews, and QA — resulting in customer growth from 30 to 75 active CD users.

Tech Stack: React.js, TypeScript, JavaScript, SCSS, Jest, Cypress

Walmart – Software Engineer III

Oct 2019 – Mar 2021 | Bengaluru, India

- Enhanced user experience for the Buy-Together feature and key carousels like “Based on your browsing history” and “People also bought” using React.js, JavaScript, and Redux, resulting in a 30% increase in items added to cart.
- Improved accessibility (A11y), integrated analytics beacons for feature usage tracking, and optimized SEO, contributing to a 15% increase in product page views over six months.

Tech Stack: React.js, Redux, JavaScript, Jest, Cypress, SEO, Accessibility (A11y)

Recrosoft Technologies (Client: Cure.fit) – Software Engineer

Oct 2018 – Oct 2019 | Bengaluru, India

- Developed Ramsay, a tool for nutritionists to manage ingredients, dishes, and meals in a centralized database used across the Cure.fit app, leading to a 20% increase in mobile app users.
- Contributed to CareFit, a doctor-facing app for tracking patient consultation history, enabling a 30% increase in patient throughput by eliminating reliance on physical records.

Tech Stack: React.js, Redux, JavaScript, TypeScript, Node.js, MongoDB

DSquare Solutions – Software Engineer

Dec 2015 – Oct 2018 | Bengaluru, India

- Developed an enhanced analytics product delivering business insights and predictions via interactive charts and dashboards, resulting in faster load times, streamlined filtering, and visually appealing visualizations.
- Implemented diverse chart types — including Column, Bar, Line, Area, Dendrogram, and Sunburst — using D3.js, contributing to the successful onboarding of 5 new customers.

Tech Stack: React.js, Redux, JavaScript, D3.js, Java, Play Framework, MySQL

Education

L.D. College of Engineering, Ahmedabad

Bachelor of Engineering (B.E), Information Technology – 2011 – 2015

Certifications

- Oracle Certified Associate, Java SE 7 Programmer
